

TECHNICAL ASSISTANCE FOR THE ELABORATION OF THE ADVANCED ENERGY DIAGNOSIS OF THE BIZKAIA PROVINCIAL COUNCIL'S ENTITIES

Posted on 27/05/2023 by Naider

In order to comply with the requirements established by [Law 4/2019 on Energy Sustainability of the Basque Autonomous Community](#) for public administrations, this assistance offers the service of carrying out the energy diagnosis of the entire provincial sector. To this end, the energy consumption data of each of the [entities](#) from 2016 to 2022 has been compiled and the relevant inventories of the buildings, installations and vehicle fleet associated with them have been carried out. As a result, an advanced diagnosis of the current state and evolution of energy behaviour has been obtained in order to, in a subsequent step, include the provincial sector in the PGAE and comply with the energy consumption reduction targets established by the Law for 2030.
