

MULTILEVEL COLLABORATIVE GOVERNANCE IN THE TXORIERRI REGION

Posted on 17/07/2025 by Naider

The **Txorierrri** region is moving forward with the implementation of its **Business Strategic Plan and Multilevel Collaborative Governance**, with the aim of building a shared working model between local authorities, businesses and the science and technology ecosystem.

The project focuses on the gradual activation of **sectoral and thematic working groups** defined in the plan, designed to translate strategic lines into real operational dynamics with the capacity to generate impact. As a first pilot experience, a working group on **innovation** is foreseen, given its cross-cutting relevance for the business and technological fabric of the territory.

Naider is supporting **Egaz Txorierrri** throughout the process in three main phases: the characterisation and definition of the working groups, the selection of the pilot group, and the **facilitation of its first operational meeting**, aimed at building trust, aligning expectations and defining a shared roadmap.

With this initiative, Txorierrri is consolidating a pioneering governance model in the Basque Country, strengthening multilevel collaboration and laying the foundations for more cohesive, innovative and sustainable economic development.
