

AIR POLLUTION LIVE

Posted on 16/08/2015 by Naider

Google goes one step further. In this case, the North American company will allow us to know the air pollution in the largest capitals of the world in real time, a program that has been developing for more than a year, as we are informed from [diaryecology](#).

This opportunity arises thanks to a collaboration agreement between Google and the company Aclima, which designs and implements environmental sensor networks.

According to this newspaper, in August of last year the company Aclima equipped three google cars, it took about a month to carry out a test in the city of Denver with, apparently, positive results.
