

AN APP TO MEDICATE ON TIME!

Posted on 11/07/2014 by Naider

[Fagor Healthcare](#) has launched a free APP called [Medical Dispenser](#), which can easily be programmed to notify at the desired time, the mobile reminds the user that it is the time to take the medication. In addition, the APP allows you to keep track of the medication taken so far.

The APP is designed so that users, especially older people, have no problem when it comes to remembering the intake of medication and complying with the prescribed medical treatment without breaking the cycles, especially in the summer season, where the change in routine makes harder to remember.
