

DENMARK, THE COUNTRY OF THE FUTURE

Posted on 27/02/2015 by Naider

Denmark is one point above the rest of the countries in terms of sustainability and proof of this is that it has decided to become independent of fossil fuel. Despite having the highest solar and wind power benefits, to achieve complete independence from fossil fuel, a reliable and secure source of energy is required. The need increases if we take into account that in today's society daily activity is unthinkable without a method of transportation such as the car or the bus.

Faced with fluctuations in the supply of electricity that solar and wind energy present, Denmark is committed to intelligent energy systems (Smart Energy Systems). [Storywise](#) is the company in charge of producing this totally renewable, reliable, free of fossil fuel and which will create many jobs in both the energy and transport sectors.
