

GESTAMP PRESENTS ITS INTERNATIONAL TECHNOLOGICAL TRAINING CENTER

Posted on 03/07/2014 by Naider

Gestamp will reinforce its leadership in the sector and its technological presence in the Basque Country thanks to the implementation of a global technological training center as well as a knowledge center for new materials at the AIC-Automotive in Amorebieta in Bizkaia.

The new center is expected to be commissioned within a year, and can start training approximately 180 professionals from around the world. The center intends to configure itself in a front of the high qualification in relation to areas such as tooling, stamping (both hot and cold) and welding. The planned investment is three million euros.

Gestamp is a global company dedicated to the design, development and manufacture of metal components and assemblies for automobiles for subsequent sale to various equipment manufacturers original. From the moment of its creation, in 1997, it has been committed to internationalization, accompanying our clients in their expansion process. They are present in the main automotive manufacturing hubs worldwide and work on various technologies such as stamping, welding and assembling assemblies, as well as in-house tool development. It distributes its activity in 20 plants in 11 countries.

We hope that the combination of this training center with the existing offer in relation to automotive R&D at the Boroa hub will be a complete success!
