HYDROGEN BATTERIES

Posted on 31/08/2015 by Naider

One of the biggest problems that we face with mobile phones today is the short duration of their battery, which is why the company Intelligent Energy is working on a new model of a hydrogen battery with autonomy of one week, according to what we are informed. the daily the telegraph.

The new battery has holes through which it is capable of expelling steam, created after the combination of oxygen and hydrogen with the aim of achieving a greater source of energy.

The battery at the moment is only a prototype and is looking for financing to go on the market, but if the production costs and the size of the device are optimal, this new invention could revolutionize the market.
