

LISBON, EUROPEAN GREEN CAPITAL 2020

Posted on 24/10/2019 by Naider

LISBOA, CAPITAL VERDE EUROPEA 2020

La capital de Portugal se convierte en la ciudad europea de referencia en materia de sostenibilidad urbana para el próximo año.

naider

Lisbon will be the [next European green capital](#), taking over from [Oslo](#) the capital of Portugal will be the one who makes visible during the next year which are the policies implemented and the changes generated in environmental matter. The award that [Vitoria-Gasteiz](#) held in 2012, today recognizes the capital lusa for [various advances in sustainability](#). The following are particularly noteworthy:

- **Carbon Neutral by 2050:** Lisbon plans to be CO₂ neutral by 2050, and it is already on track. From 2012 to 2016, emissions were reduced by 42% and a reduction of 60% is estimated for 2030.
- **Servitization of sustainable mobility:** The city has a shared electric mobility service. Lisbon offers citizens and visitors cars, motorcycles and electric bicycles for shared use.
- **Efficient water management:** It is one of the most efficient cities in terms of water distribution. Losses have been reduced since 2005 by 16%. An innovative water recirculation system has been created to use water from treatment plants in parks and gardens.
- **Complete and expand the green infrastructure network:** Lisbon is connecting its parks and gardens through green infrastructure with the ecological corridor [Vale de Alcântara](#) . Corridor that plans to introduce biodiversity to the center of the city.

Like Lisbon, many other [cities in Europe](#), and in the world, are examples to follow and ideas can be drawn from them to provide solutions to the different challenges that our cities face.
