

#NAIDERCOP21 (ELEVENTH DAY): ELECTRIC BUSES FOR BOURGET

Posted on 10/12/2015 by Naider

Eleventh day of COP21.

Among the deployment of demonstrations carried out in the Bourget, and within the ISO 20101 sustainability certification for events obtained by the venue, it is worth mentioning the fleet of electric buses that are used to allow event participants to access the venue. These communicate regularly and free of charge the train and metro stations near the event, providing easy access to all those interested. These buses do not make the slightest noise, and demonstrate that the transition to an urban public transport network based solely on electric vehicles is possible.
