

NANOTECHNOLOGY LEADS THE WAY

Posted on 16/07/2015 by Naider

Maxwell Matz said that the human being only maintains balance when moving forward, in this case and applied to nanotechnology it seems that balance or equality is progress, or the same is clear from the recent [intelligenthq study](#).

One of the challenges of science in the last decade has been to try to reduce inequality on the planet, today and thanks to nanotechnology (let's remember that nanotechnology is based on the manipulation of matter on a nanometric scale) we are taking one more step towards the objective.

Problems such as water purification and food maintenance can be solved thanks to science as long as the necessary resources are applied for it.
