“ON” A LA SOLAR

naider

La producción la energía solar crece un 33% hasta cifras récord en 2015

Como consecuencia el precio también ha disminuido

The commitment to renewable energy is going to materialize in a record figure in terms of the production of photovoltaic energy panels. According to the consultancy [IHS](#), the consumption of photovoltaic energy would have increased by up to 33 % during this year causing, in this way, the increase in the production of the mentioned solar panels.

All of this will bring with it a drop in the price of energy which, according to experts, will be moderate but uninterrupted until mid-2017, when it will grow again.

How can we find out through [renewable-energy](#), solar energy has reached unexpected heights in 2015, reaching 65.5 GW produced.
