

SUBMERGED ENERGY

Posted on 13/07/2015 by Naider

The law of conservation of matter explains to us that energy is neither created nor destroyed, from Naider we do not contradict the greats of science but we believe that it lacks a nuance, it can be better used.

A report from [European Ocean Energy Roadmap \(EOER\) 2010-2050](#) reveals that ocean energy could cover 15% of Europe's future needs 2050, but as always, everything will depend on what the big multinationals think about the subject, which usually depends on what their shareholders think, who don't have a very good opinion about environmental sustainability and finite resources, a shame .

From Naider we are waiting for what happens about this new source of energy, we hope we do not have to wait too long.
