

THE CHALLENGE OF THE CITIES OF THE FUTURE. AGENDA 2030

Posted on 11/05/2010 by Naider

[Citizen Agenda 2030 for Science and Innovation](#) is a social outreach action recently launched by the Ministry of Science and Innovation [href=""](#) and the <http://www.fecyt.es/> target="blank" rel="noopener">FECYT and which includes 14 great challenges that we will face in the coming years and how some personalities from different disciplines propose to face them. One of them is [More comfortable, accessible and ecological cities](#), presented by Norman Foster, together with others related to the unification of theories of physics, the use of ICT in education, personalized medical treatments

[thanks to advances in genetics or the more efficient storage of electricity, among others.](#)

[I leave here the two videos published with the presentation of Norman Foster and the importance of the topic:](#)
