

UVA ENERGY

Posted on 16/08/2015 by Naider

According to the latest study by [distributed solar PV](#) energy photovoltaics will be consolidated as one of the most profitable in terms of costs, making it one of the most efficient energies that we can find today.

According to this study, an average revenue of 151,000 million dollars is expected for the year 2024, it also follows how the activity of electricity production is shifting from Europe to Asia, a continent that has become the largest collector of solar energy.

From naider we are glad that alternative energies are, little by little, eating up energy from finite and highly polluting resources and we hope that this reduction in costs will serve as an incentive for regional companies to establish themselves in this sector.
