VIRTUAL EXPERIENCES MADE IN EUSKADI

Posted on 03/06/2016 by Naider

The virtual reality is one of the technologies whose development has the most potential presents, and promising advances are also being made in the Basque Country that show its multiple applications. An example of an application for an immersive experience, which combines leisure with observing the city from a different perspective, is a virtual paddle surf simulator developed by the Basque company Kanibal Solutions. The simulator, with which a virtual tour of the Bilbao estuary is carried out, will be presented at a stand

open to the public on the Uribitarte pier between June 3 and 5 as part of the Bilbao World SUP Challenge.
