

# ENERGY SOURCES FOR COOKING

*Posted on 20/06/2019 by Naider*

According to the [2018 Sustainable Development Goals Report](#), 41% of the population The world lacks access to energy or clean fuel for cooking, and they have to resort to solid fuels (coal, wood, dung or crop waste) or kerosene. This means that three billion people see their health affected by air pollution in their own homes.
