

# **VIDEO: 2018 WAS THE FOURTH WARMEST YEAR ON RECORD**

*Posted on 15/03/2019 by Naider*

**NASA data confirm that the last five years have been the warmest since records exist (1880). Additionally, 18 of the 19 warmest years have occurred after 2001.**

**The United Nations Intergovernmental Panel on Climate Change warned in a [special report](#) that global warming will become of 1.5°C between 2030 and 2052, if we advance at the current rate, which would mean the loss of 100% of coral reefs in the world, a rise of 10 cm in sea level, as well as a great reduction in the capacity of crop in many parts of the globe.**
