

ENERGY MANAGEMENT IN THE PUBLIC SECTOR TRAINING PROGRAMMES

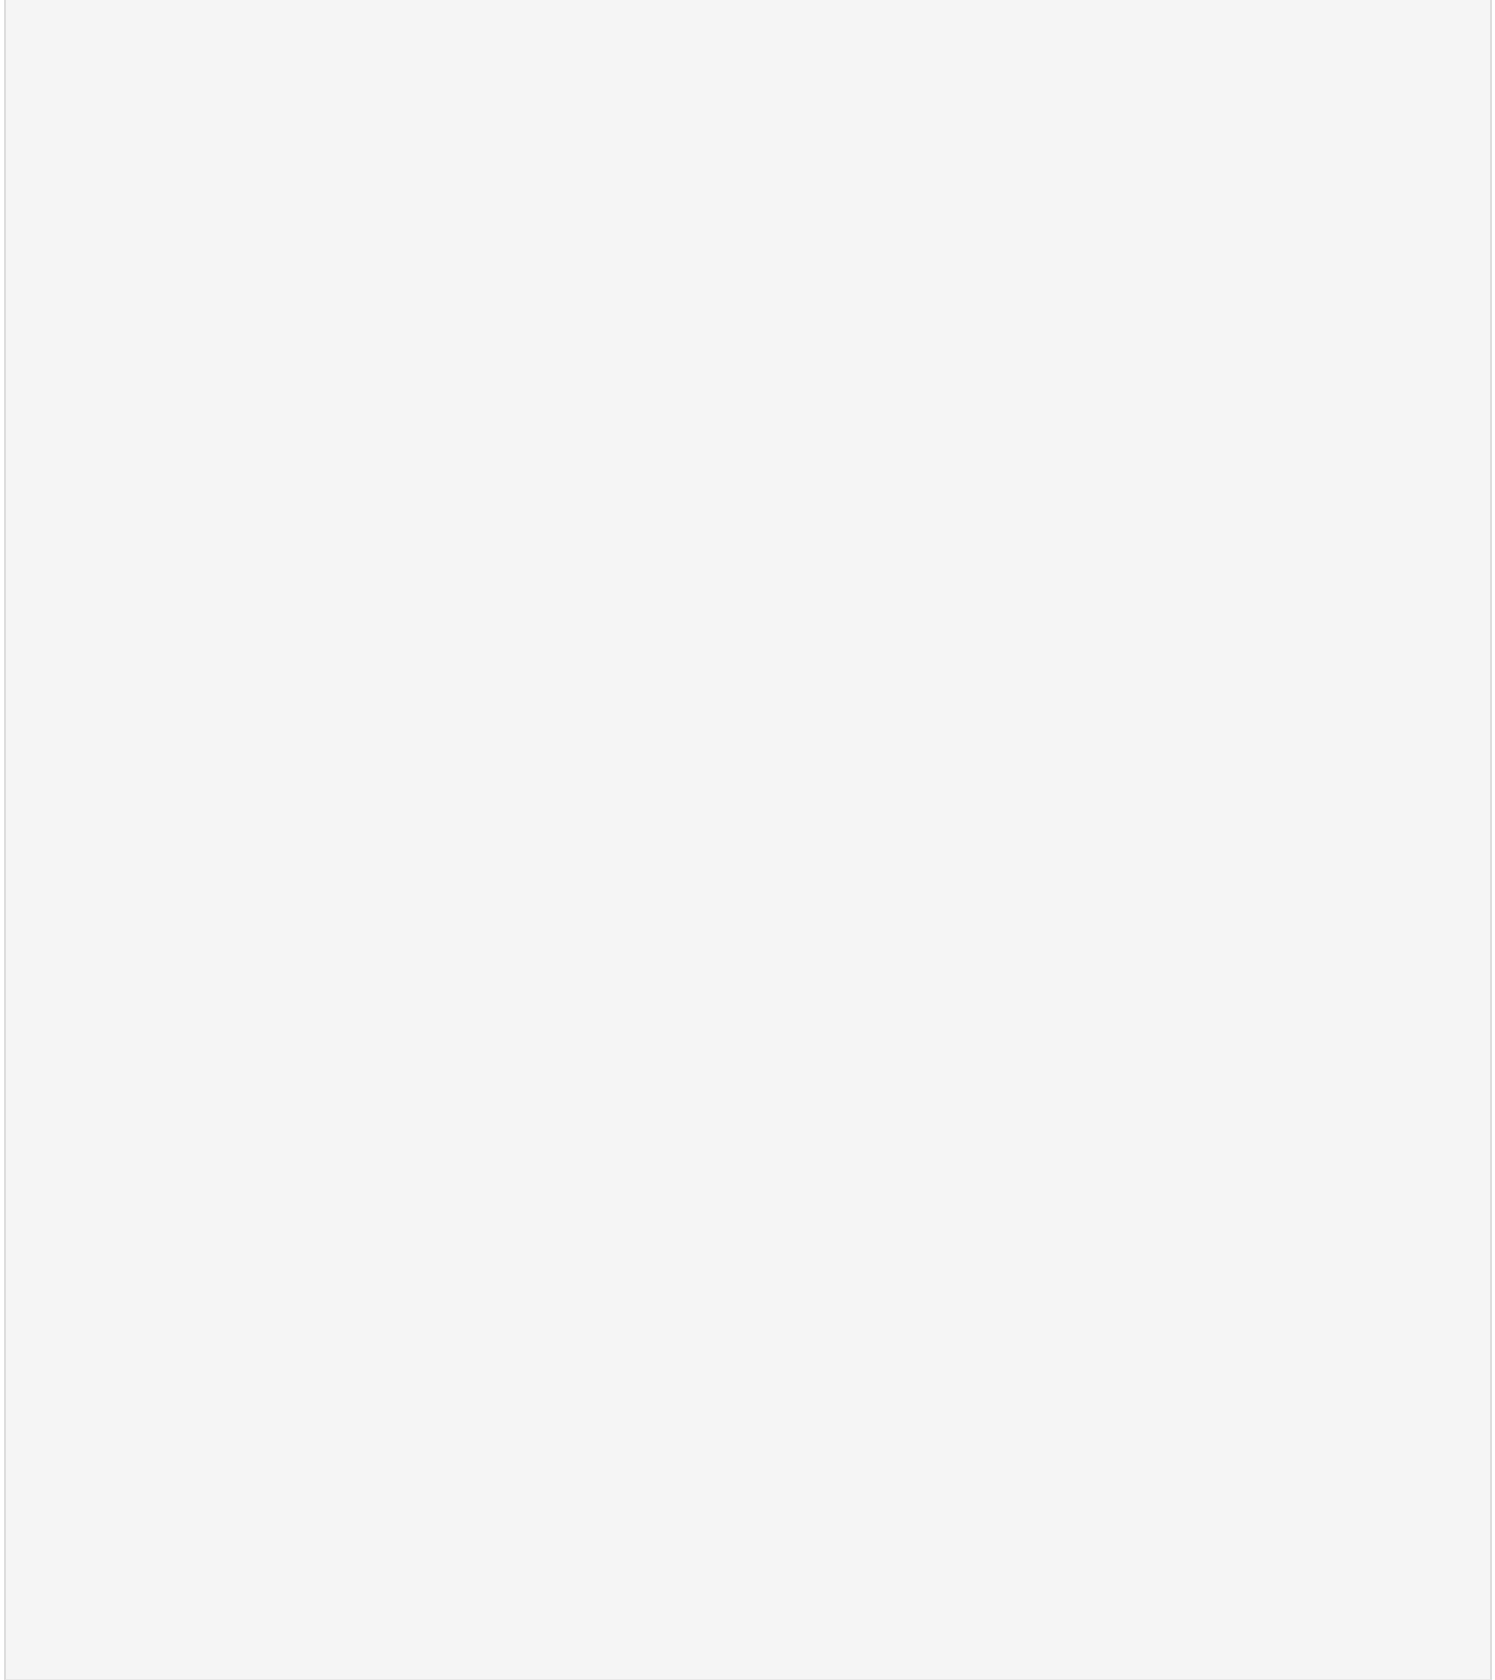

Posted on 01/07/2024 by Naider

The Basque Climate Change Strategy 2050 approved to achieve the long-term **GHG emission reduction targets**, establishes among its goals that of having a **responsible, exemplary and benchmark Basque public administration in terms of climate change**, and points out that in order to achieve the involvement of all agents in Basque society, **exemplary action must be promoted by all Basque public administration bodies**.

Through **Law 4/2019 on Energy Sustainability of the Basque Autonomous Community**, public administrations are obliged to carry out a series of actions to advance in the energy transition and reduce their consumption. Specifically, **article 27 mentions the obligation to adopt a training plan for staff in their area of action on techniques to increase energy saving and efficiency** within one or two years of the law coming into force, depending on the population.

This training aims to **respond to this need for public entities, in addition to providing the necessary tools and setting the main guidelines for the administration to achieve the energy objectives set**, focusing on the most important points, such as objectives and actions, energy inventories, consumption control, energy audits, self-consumption and renewable energies and renewal of installations, equipment, fleets and vehicles.
