TOOL TO SUPPORT ENERGY REHABILITATION AND
DECARBONISATION OF URBAN ENVIRONMENTS

ReHAB
by naider

what it is

TOOL TO SUPPORT ENERGY REHABILITATION AND DECARBONISATION OF URBAN ENVIRONMENTS

REHAB is a support tool for decision making related to the energy rehabilitation of buildings and the improvement of energy efficiency. On the one hand, it provides information on the **current energy status of the building stock** in each municipality, quantifying consumption and emissions. On the other hand, **it helps to identify the buildings in which it is a priority to intervene**, as well as to choose the measures (passive and active) and the **degree of refurbishment** to be implemented. Finally, it makes it possible to **estimate the costs** by quantifying both the initial investment and the annual economic savings obtained and to know the **socio-economic impact** produced at the level of municipality, neighbourhood or building. In addition to these functionalities, REHAB offers an improved **visualisation** experience, allowing **3D maps** to be explored and buildings to be selected intuitively.

Seleccionar Barrio sobre el que se quiere intervenir:

Todas ^

- ABETXUKO
- ADURTZA
- ALI-GOBEO
- ARANA
- ARANBIZKARRA
- ARANTZABELA

goals

KNOWING, ASSESING, REHABILITATING, DECARBONISING

1. **To know the current energy** status of the building stock in each municipality, as well as its possibilities and opportunities for refurbishment and energy efficiency improvement.
2. **Assess the costs and impacts** of the various possibilities of action in all or parts of each municipality.
3. **To assist in decision-making** related to energy efficiency improvement processes, intervening first in the areas that show the worst performance.
4. **Raise awareness and accompany citizens** throughout the process, also allowing them to know in a clear and concise way the current regulations, the existing financial instruments and other cross-cutting aspects.

ENERGY EFFICIENCY SCENARIOS, DEGREE OF INTERVENTION, REQUIRED INVESTMENT AND ANNUAL ECONOMIC SAVINGS

- The tool is prepared to display **data at city, neighbourhood or building level**. The various scenarios can be presented (1) **by specific areas or buildings** on which action is to be taken; and/or (2) **by current energy certification** (for example: all buildings with a G rating in an area).
- Regarding the **typology of actions** to be carried out on buildings, it is possible to select the degree of intervention sought*: comprehensive refurbishment, passive measures on the entire building envelope, active measures, interventions on façades, roofs, openings, etc.
- **Once the desired inputs have been selected**, the tool shows the total investment of the action, the annual economic savings, the number of dwellings involved, the percentage reduction in annual consumption, the consumption before and after the refurbishment, the emissions before and after the refurbishment, and the energy rating before and after the refurbishment.

ReHAB. REHABILITACIÓN ENERGÉTICA URBANA beta by naider

La herramienta permite estimar las inversiones de la rehabilitación y el impacto producido, pudiendo seleccionar directamente en el mapa uno o más edificios sobre los que se desea intervenir, o elegir un barrio mediante el menú desplegable.

Para ello, se toma como referencia una actuación de rehabilitación con la que se interviene sobre la fachada, cubierta y huecos.

Seleccionar barrio sobre el que se pretende intervenir:

CORONACION

Seleccionar medida con la que se pretende intervenir:

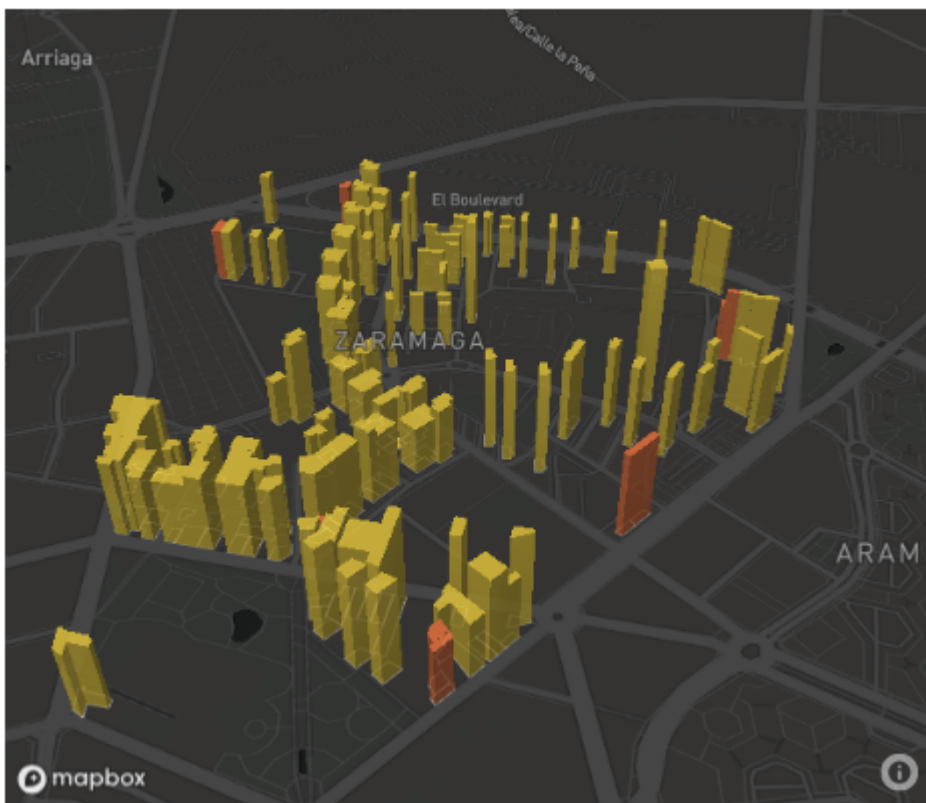

Paquete 1: Cubierta, fachada y huecos

Seleccionar calificación energética sobre la que se pretende intervenir:

Inversión (total €)	Ahorro económico (€/año)	N.º de viviendas sobre las que se interviene	Ahorro energético (kWh/m2 año)
16,4 mill.	1,2 mill.	3749	45 %
Consumo antes (kWh/m2 año)	Consumo después (kWh/m2 año)	Emisiones antes (kgCO2/m2 año)	Emisiones después (kgCO2/m2 año)
304	167	66	36

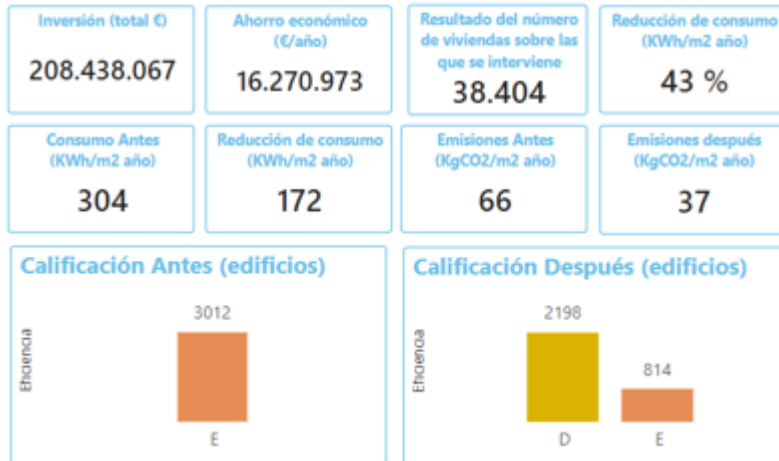

Seleccionar Medida con la que se desea intervenir

Paquete Pasivo - Exterior y Ventanas: Aislamiento fachada ...

Seleccionar Categoría Energética sobre la que se quiere intervenir

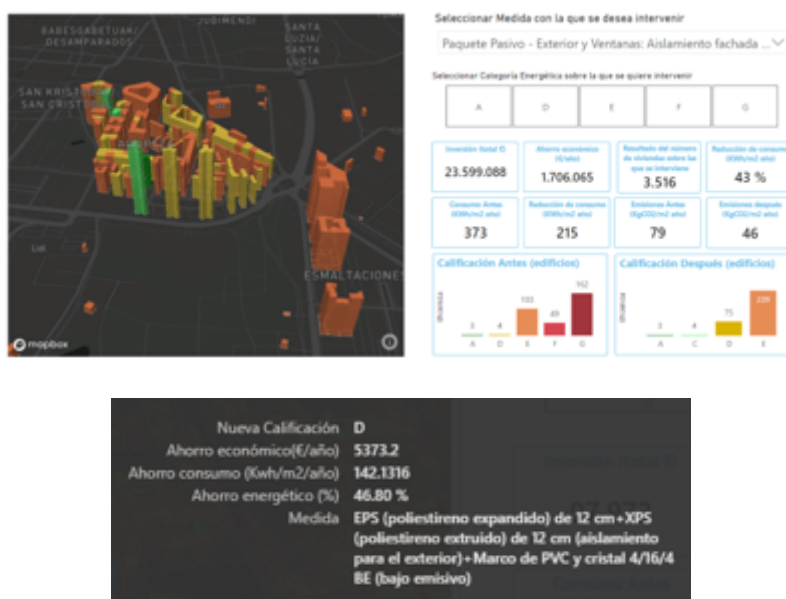

beneficiary entities

LOCAL AUTHORITIES AND PUBLIC HOUSING, URBANISM AND REHABILITATION COMPANIES

Local authorities and **public housing, urban planning and rehabilitation companies** that want to know and improve the energy efficiency of their building stock can benefit from this tool. REHAB provides a **comprehensive picture of the energy status of buildings** in the municipality, facilitating the identification of priority areas for intervention and their degree. It also facilitates

informed decision making on retrofit investments, considering costs and benefits at the local level.

In its approach to the community, it can be conceived as a **public resource open** to citizens. It can be a valuable tool for **communities of homeowners and neighbours**, offering the possibility to explore energy retrofitting options in their homes and buildings.

Nueva Calificación	D
Ahorro económico(€/año)	5373.2
Ahorro consumo (Kwh/m ² /año)	142.1316
Ahorro energético (%)	46.80 %
Medida	EPS (poliestireno expandido) de 12 cm +XPS (poliestireno extruido) de 12 cm (aislamiento para el exterior)+Marco de PVC y cristal 4/16/4 BE (bajo emisivo)

possibilities

ENERGY PROFILE, ASSESSMENT, PLANNING, MONITORING, REPORTING

The tool offers a variety of possibilities based on the results obtained:

- **Energy profile** of the municipality: sufficiency, efficiency and renewables
- **Energy rehabilitation roadmap** by measurable phases of PASE-E (Building Rehabilitation Passport)
- **Economic analysis** of comprehensive retrofitting by building type
- **Planning** based on retrofit scenarios to achieve **European decarbonisation targets**: Fit for 55 (Target 55), EPBD, REPowerEU, etc.
- **Evaluation and monitoring** of indicators, comparative graphs, active and passive measures.
- **Socio-economic impact** of interventions
- Useful links
- Trend reports

interaction

REHAB TOOL IN DEMO VERSION

***Note for the beta example:** for the estimation of investments and the impact produced, a typical refurbishment action (passive package) is taken as a reference, with which the entire envelope (façade, roof and openings) is intervened.
