The [Amorebieta-Etxano Council](#) is moving towards a greener and more resilient municipality, with NAIDER's technical support, in the framework of [Regulation \(EU\) 2024/1991](#), which introduces new obligations for local authorities regarding urban ecosystem restoration.

The project supports the Council in **identifying, organising, and reporting the measures related to urban green space and tree cover**, in line with the requirements of the Ministry for Ecological Transition. The work encompasses a diagnosis of available information, the preparation of technical and cartographic documentation, and guidance throughout the official submission of data within the established deadlines.

The assignment is being carried out under tight deadlines and precise methodological requirements. The main challenge is to translate municipal planning into a structured, coherent, and traceable dossier. NAIDER draws on its expertise in territorial sustainability and support to public administrations to deliver a rigorous and operational response to this new regulatory framework.
