

ANALYSIS OF ENVIRONMENTAL POLICIES WITH AN IMPACT ON LAND USE AND MANAGEMENT

Posted on 04/09/2020 by Naider

Category: [News](#)

The purpose of this work is to assess in detail the way in which the soil is taken into account (directly or indirectly) in the different environmental policies, both general (for example, the Environmental Framework Program) and sectoral (for example, change climate or biodiversity) with the ultimate goal of identifying gaps and synergies and thus advancing towards the alignment of these plans with the objectives of the future Euskadi Soil Protection Strategy.
