The [Department of Health](#) of the Basque Government is being supported by NAIDER in the design and development of the Basque Health and Environment Observatory. The Observatory, whose creation is a common objective of the Health and Environment Management Sectors, will allow a better understanding of the environmental impact on health and will facilitate decision-making and the implementation of effective policies to improve the quality of life of the population of the Basque Country.

The need to create a Basque Health and Environment Observatory stems from two strategic reference instruments of the Basque Autonomous Community in the field of health and environment policies: the [Basque Health Plan 2030](#) and the [Environmental Framework Programme 2030](#). The Euskadi 2030 Health Plan is the roadmap that defines the health policies to be developed in the coming years, with the aim of achieving a healthier Euskadi. The Environmental Framework Programme also defines the direction of the Basque Country's environmental policies until the end of the decade, with the aim of becoming a more sustainable territory by 2030.
