**Tags:** [Aprendizaje activo](#), [Conceptualización de infraestructuras](#), [Promoción económica local y territorial](#)

Naider accompanies Oarsoaldea Garapen Agentzia in the implementation of the Berpiztu Ikas Faktoria project, a great opportunity for the development of training projects in the region.

Within the framework of the **BERPIZTU programme for the Economic Revival and Employment of the Basque Country (2020-2024)** and in line with the actions set out in the **Regional Strategic Plan 2017-2025**, various projects are being developed in the Oarsoaldea, including **Habian Berrikuntza Gunea** and the **Socio-labour Insertion Pole**. The implementation of these two strategic projects will involve the implementation of new infrastructures and assets, including learning laboratories for the development of skills in cybersecurity, electromobility and health, and the centre for experimentation and innovation for employment, labour and social integration. These new infrastructures are in addition to other existing infrastructures linked to other areas also relevant to the region, such as the blue economy, the food industry and the cultural and creative industries.

In this context, **Ikas Faktoria** has been created, a network of connected facilities to which new facilities, both public and from companies in the region, can be incorporated around different specialisations of interest to help the unemployed, entrepreneurs and the business fabric as a whole on the path to competitiveness in order to sustain their activity and jobs.

Naider, based on its experience in the conceptualisation and design of active learning infrastructures, including in the Oarsoaldea itself, assists in the definition and establishment of the strategic focus and scope of Ikas Faktoria, the framework conditions, the map of competences to be developed, the strategic objectives of the project, and the 2023-2026 operational model.
