-

NAIDER begins the year with great news. The project
Horizon 2020 in which we are participants has been approved by the European Commission.
We are embarking on the first, hopefully, of many European projects. SCORE is
the acronym taken by the project entitled *Smart COntrol of the*
Climate Resilience in Eeuropean coastal cities que
seeks to increase the resilience to climate change of coastal cities
European. For this, an integrated framework-methodology will be used based on three
Main axes: 1) Participatory method of the "Living Lab"; 2)
Ecosystem-based approach/adaptation; 3) technologies
smart.

Nader's task will be to co-lead the second package of
work in which it is sought to land the different technologies and systems of
adaptation based on ecosystems in the different "living labs" located
in 10 different cities/regions of 7 European countries. The work will consist
in accompanying the “coastal cities living labs” (living laboratories in the
coastal cities) throughout the design, execution and closure phase of the
project. All this will be done with the help of the different agents of each place
and taking into account the idiosyncrasies of each territorial context.
