From Naider we are lucky to be accompanying the development agency Bidasoa Bizirik in the process of implementing the circular economy (EC) in the business fabric of the region formed by Irún and Hondarribia, with special emphasis on three preferred sectors: agri-food, metal and electronic products, and rubber and plastics.

The project has been raised from the analysis,
learning and action with the aim of not only transferring knowledge
about CE to the agency, but also to identify opportunities in terms of
EC in the region and articulate a pilot project that serves as an example and starting point departure.

In this month of March we close the stage of
analysis and learning with the execution of the third collaborative workshop that
will allow you to choose the pilot project to run.

We will keep you informed!
