Today, we held an interesting working session as part of the [ADVANCED CICLO project](#), attended by the five companies we have advised on the circular economy over the past few months. The project is funded by the Basque Government-Ihobe through the [Pyme Circular programme](#), with ASLE participating as an intermediary, alongside five of its associated companies: [Izar Cutting Tools](#), [Tornillería Deba](#), [Heroslam](#), [New Fepa](#) and [Tipeberri](#).

Using our **ADVANCED CICLO methodology**, we have worked with these companies to integrate circular economy concepts into their business models and strategies. We have carried out a circularity diagnosis to determine their level of maturity in terms of planning, collaboration, eco-design, energy and material consumption, recycling, and so on. We have then provided them with a practical roadmap to help them take advantage of the opportunities offered by the circular economy approach. A common element of our work with all of these companies has been the **calculation and analysis of their carbon footprint**, completing scope 1 and 2, and taking the first steps towards scope 3.

Calculating the carbon footprint and working on other areas makes it easier for companies to respond quickly and effectively to new customer requirements and market trends, establishing the circular economy as a key factor in increasing their competitiveness.

Contribuir a reforzar y revitalizar el compromiso de ASLE con sus empresas asociadas. Les ofrece un valor agregado significativo, proporcionando un criterio bien fundamentado, asegurando asistencia constante, manteniendo una relación de cercanía y compromiso, y presentando soluciones efectivas y personalizadas a los desafíos que enfrentan.

Metodología NAIDER adaptando propuestas internacionales. En particular, nos apoyamos en pautas establecidas por el Pacto Verde Europeo, el *Basque Green Deal*, la Estrategia de Economía Circular de Euskadi 2030, el Plan Estratégico de Economía Circular y Bioeconomía 2024, el Plan de Prevención y Gestión de Residuos de Euskadi 2030, el Plan de Transición Energética y Cambio Climático 2030, el Programa de Compra Pública Verde .

DE MANERA PARTICULAR EN 2024 ADVANCED CICLO HA PUESTO EL FOCO EN:

1. Incorporación de la variable cambio climático en los sistemas de gestión de las empresas
2. Huella de carbono
3. Normativa y regulación (envases y residuos de envases)
4. Aproximación al ACV
5. Enfoque estratégico de la economía circular en el modelo de negocio de las empresas
