The **Bilbao 2050 Urban Digital Twin**, developed by NAIDER for Bilbao City Council, has been selected as a **finalist in the Smart Territories category** of the [14th enerTIC Awards](#). The awards recognise projects that apply **digitalisation to energy efficiency and sustainability**.

The digital twin has been developed as part of the technical support provided for the [Bilbao 2050 Environmental Strategy](#). It brings together monitoring of the **strategy's four pillars** (carbon neutrality, flood risk, heatwaves and environmental health) on a **3D map of the city**. It also includes tools to simulate energy retrofit, climate adaptation and renaturalisation measures, making it possible to **compare scenarios up to 2050**.

Bilbao shares the final with Segovia City Council's Digital Twin and Valladolid City Council's VIBES-Ríos de Luz. The winner will be chosen by **online vote between 20 October and 13 November**, and the result will be announced on [10 December in Madrid](#).

Further information on the digital twin is available on the [project page on NaiderLab](#) and in the [entry published by enerTIC](#) (in Spanish).
