Yesterday, 17th September, NAIDER went to the [IZAR Cutting Tools](#) factory in Amorebieta-Etxano to accompany the [ASLE](#) business association in the launch of the ADVANCED CICLO project. This project represents the evolution and optimisation of the [CICLO project](#), in which we already worked with ASLE to promote circularity and decarbonisation in multisectoral industrial SMEs.

Thanks to the knowledge acquired during the implementation of the CICLO project, new tools for the circularisation and decarbonisation of multisectoral industrial SMEs have been developed with NAIDER's own methodology, which will be applied this time in the ADVANCED CICLO project (design, development, validation and implementation of strategies, technological tools, certifications and pilot projects according to the CICLO methodology). On this occasion, NAIDER will work with five SMEs, both individually and collectively, to integrate circular principles into the core of their organisation.

The inaugural meeting was attended by IHOBE, which supported both the CICLO project and this second phase through the Pyme Circular Programme, and the five selected SMEs: [HEROSLAM](#), [NEW FEPA](#), [TIPEBERRI](#), [Tornillería DEBA](#) and IZAR itself.

Many thanks to IZAR for welcoming us to their facilities!
