Tags: [Construction Sector Decarbonisation](#), [Gipuzkoa](#)

The [White Paper on the Decarbonisation of the Construction Sector](#) was presented today, a publication in which NAIDER participated together with [Build:Inn, the Basque Construction Cluster](#), and which was made possible thanks to funding from the [Diputación de Gipuzkoa](#).

The presentation took place in the auditorium of [Naturklima, Gipuzkoa's Climate Change Foundation](#), and was attended by the Deputy of the Department of Sustainability and leading companies in the field of decarbonisation, such as [Heidelberg Materials](#) and [Campezo](#), among others.

The white paper developed by NAIDER provides a catalogue of decarbonisation measures for each link in the construction value chain, as well as an overview of the related regulations or major market trends affecting the reduction of greenhouse gas emissions.

We would like to thank Build:Inn for entrusting NAIDER with the development of this important project, which further consolidates our position as one of the leading climate change consultancy firms in Europe.
