NAIDER Behatokia is now available on our website, an interactive panel that allows users to explore more than 120 indicators sourced from the Basque Government's official Udalmap system. Through this visual analysis tool, it is possible to navigate, compare and understand the socio-economic reality of the Basque Country at provincial, regional and municipal levels.

The panel provides a clear and structured view of the territory through dynamic charts and thematic maps, enabling a faster understanding of the data and supporting more informed decision-making. It is designed for public administrations, local stakeholders and territorial analysis professionals, combining technical rigour with advanced usability.

NAIDER Behatokia automatically connects to Udalmap databases via its API, structuring and linking the information with fact tables that generate advanced metrics and intelligent narratives. Key features include comparability between municipalities and regions, forward-looking projections based on recent years' data, weighted averages, and segmentation parameters that allow users to customise their selection of indicators and territories.

Explore NAIDER Behatokia and turn data into knowledge for action:
