NAIDER launches a new collaboration alliance with the Catalan technology centre [EURECAT](#). This first collaboration aims to develop an Environmental Observation and Monitoring System for the Basque Environmental Agency IHOBE. The system will integrate information on climate change, circular economy, soils and local sustainability. EURECAT incorporates to the collaboration its technological knowledge in the field and in digitisation processes.

NAIDER incorporates its specific know-how in strategic environmental planning and expert knowledge of environmental and climate trends and scenarios.

EURECAT is the main technology centre in Catalonia and one of the most important technology centres in Europe. It has an annual income of more than 50 million euros, between private clients and public programmes, with a total staff of more than 670 professionals distributed among its 11 centres distributed throughout Catalonia, as well as a headquarters in Chile.
