NAIDER is collaborating with IHOBE on the preparation of the 2025 Environmental Situation Report for the Basque Country, providing technical assistance for the design and development of an advanced environmental data visualisation system. The project aims to transform the technical report into an accessible and informative resource, facilitating the understanding of the main environmental trends in the Basque Country among public decision-makers, technical staff and the general public.

As part of this collaboration, NAIDER will develop an interactive Power BI dashboard that enables dynamic exploration of key indicators related to climate change, water, air, soils, biodiversity, circular economy, waste and citizens, among other areas. The work combines rigorous data analysis, intuitive visual design and a clear narrative, aligned with the principles of transparency and accountability promoted by IHOBE.
