The Biodiversity Foundation has selected the project Presented by NAIDER as one of the 40 subsidized projects among more than 230 applications at the state level within the call for grants from the Biodiversity Foundation, under a competitive bidding regime, to carry out projects related to adaptation to climate change . The project pursues the naturalization of the industrial estates located in the ecological corridor Jaizkibel- Peñas de Aia with the aim of minimizing the landscape and environmental impact so that human activities and infrastructures are integrated into nature. This recognition reinforces our motivation to propose transformative solutions aimed at territorial sustainability and coexistence with nature.
