Performance of the Innobasque R&D Leading Indicator.

[Innobasque](#) has once again trusted Naider to update the R&D leading indicator in 2019 and 2020. Our team Last year, it supported the Innobasque technicians in the methodological development that allowed, with a very high degree of precision, to estimate the level and evolution of investment in R&D with respect to GDP in the Basque Country corresponding to a current year. A very useful instrument for Innobasque when it comes to making policy decisions and learning about the reality of Basque R&D, since it makes it possible to overcome the difficulty that statistical indicators in this matter are published with two or more years of lag.< /div>
