The City Council of Vitoria-Gasteiz has the technical assistance of NAIDER for the design, development and implementation of the Interactive Platform for the Indicator Observatory of the Vitoria-Gasteiz Urban Agenda 2030.

NAIDER will contribute to creating an Indicator Monitoring System available to the citizens of Vitoria-Gasteiz that will serve as a tool for strengthening a shared vision of the future. The assistance for the Sustainability Indicators Observatory Platform includes, among other aspects, the review of the categorisation and alignment of indicators, the automation of data collection and their calculation and recalculation, and the optimisation of the user experience.
