NAIDER has submitted a proposal to the Generalitat Valenciana's Directorate-General for Innovation to carry out the territorial study that will select locations for, and determine the scale of, the future **technology parks** envisaged in the Endavant Plan for recovery after the 2024 DANA floods.

The new **entrepreneurship and innovation hubs** aim to diversify the business base and create quality jobs in sectors such as aerospace, biotechnology and green hydrogen.

The challenge goes beyond finding land. The aim is to shape **innovation ecosystems** that drive the recovery of the affected area, connect the region's three provinces and ensure the **territorial and climate resilience** of each site.

The proposal includes five territorial analysis maps that bring together risk, economic activity, connectivity and the knowledge ecosystem at regional scale.
