The Department of Economic Development, Sustainability and the Environment of the Basque Government has published the [2023 Environmental Profile of the Basque Autonomous Community](#), for which NAIDER has had the honour of collaborating with IHOBE. Continuing the series of annual profiles, this one focused on the [close relationship between the environment, health and well-being](#), going into greater depth on the importance of environmental health.

The Environmental Profile is the tool that periodically assesses the general situation of the environment in the Basque Country, through a report of key environmental indicators that show the evolution of the main indicators. Its preparation involved the identification and calculation of a series of indicators to define the current state of the environment in the Basque Country and to analyse the challenges and prospects facing Basque society.
