Strategic Environmental Assessment of a Special Urban Planning Plan.

Naider's team is working on the preparation of the Strategic Environmental Document for a Special Urban Planning Plan in the municipality of Amorebieta-Etxano (Bizkaia). It is an urban operation in an industrial estate of the municipality. The work includes carrying out an environmental and physical diagnosis of the vicinity of the industrial area, although the most relevant is the impact matrix prepared to find out how this change in management will affect the natural environment. We also include corrective and preventive measures in the report to minimize possible impacts on the physical environment.
